

# JAGADEESH NETHINTI

Full Stack Developer & Data Analyst

Hyderabad, India | +91 93926 96206 | jagadeeshnethinti809@gmail.com

## PROFESSIONAL SUMMARY

Full Stack Developer and Data Analyst with 2.3 years of experience building 10+ mobile and backend applications using React Native and NestJS. Experienced in connecting AI tools such as Claude and ChatGPT into real applications, and in building chatbots and running local AI models using Ollama and Hugging Face. Also skilled in data analysis using SQL, Python, and Power BI — work that improved marketing campaign results by 15% and helped a business team identify SUVs as their top revenue source (35% of total revenue), which changed their pricing approach. Comfortable working across both the application side and the data side of a product.

## TECHNICAL SKILLS

**Mobile & Frontend:** React Native, JavaScript (ES6+), TypeScript, Redux Toolkit, Responsive UI Development

**Backend, Systems & Tools:** NestJS, Node.js, REST API Design, JWT Authentication, Linux, Git, GitHub

**AI & Chatbots:** Anthropic Claude API, OpenAI/ChatGPT API, Ollama, Hugging Face, Chatbot Development, Local LLM Setup, Prompt Engineering

**Databases:** MySQL, PostgreSQL, Firebase, SQL (Joins, CTEs, Window Functions), Data Modeling, ETL Processes

**Data Analytics:** Python (Pandas, NumPy), Power BI (DAX, Data Modeling), Excel (Power Query, VBA, Pivot Tables, VLOOKUP/INDEX-MATCH), Statistical Analysis, Jupyter Notebook

## PROFESSIONAL EXPERIENCE

### Software Engineer (Full Stack) & Data Analyst

July 2024 – Present

*Penguin Solutions Pvt. Ltd., Hyderabad — Sole developer/analyst on a 2-person team*

- Built and delivered 10+ mobile and backend applications over 2.3 years, covering React Native front ends and NestJS backend services.
- Built 20+ screens and UI components in React Native with Redux Toolkit, and connected them to backend services built in NestJS.
- Added AI features to the app by connecting Claude and ChatGPT APIs, powering recommendations and auto-generated content.
- Set up secure login using JWT authentication and improved app performance by reducing unnecessary re-renders.
- Built Power BI dashboards with custom visuals to track revenue, campaign performance, and user activity, used weekly by product and marketing teams.
- Studied customer behavior on pizza sales, car rental, and retail platforms using SQL and Python; the findings improved marketing campaign results by 15%.
- Analyzed car rental booking data using SQL (joins, CTEs, window functions) and found that SUVs made up 35% of total revenue, which shaped pricing and fleet decisions.
- Built automated reporting pipelines connecting MySQL and PostgreSQL to Power BI, cutting down manual reporting work and keeping stakeholder data up to date.

## KEY PROJECTS

### Radii — AI-Powered Healthcare Nutrition App

*React Native, NestJS, Claude API, ChatGPT API, SQL, Power BI*

- Building a mobile app that gives people personalized food and meal suggestions based on health conditions like diabetes or high blood pressure.
- Connected both Claude and ChatGPT APIs to power the suggestion engine, with a NestJS backend handling the logic behind it.
- Designed and manage the SQL database for food and nutrition data; used Python to process data for the recommendation engine.
- Built Power BI dashboards for the admin side, tracking how users engage with the recommendations.
- Built the React Native app screens where users enter their health details and get real-time suggestions.

- Wrote the prompts and error-handling logic for the Claude and ChatGPT integrations so the AI responses stay reliable and medically careful.
- Used Git and GitHub to manage version control across the mobile, backend, and data work.

### **CarHive — Car Rental Mobile Application**

*React Native, Redux Toolkit, JWT, SQL, Power BI*

- Built a car rental app with real-time vehicle availability and secure JWT-based login.
- Improved app performance by optimizing state management with Redux Toolkit to reduce re-renders.
- Designed the SQL tables for bookings, vehicles, and users, and used joins, CTEs, and window functions to study booking volume, vehicle usage, and busy rental periods.
- Used SQL and Power BI to compare demand and revenue across SUVs, sedans, and hatchbacks, and spotted vehicle types that were underused.
- Built Power BI dashboards tracking cancellation rate, average rental length, and repeat customers, turning app data into ideas for retention and fleet growth.
- Worked across the full stack, from the React Native front end to the backend data, to connect feature usage with business decisions.

### **SM Lorry — AI-Powered Goods Transport & Vehicle Tracking App**

*React Native, NestJS, SQL, AI Chatbot, Real-Time Tracking*

- Built a mobile app that lets businesses book lorries (trucks) to transport goods and track the vehicle's location during delivery.
- Built the app's front end in React Native and the backend in NestJS to handle bookings, driver assignment, and order status.
- Added an AI chatbot to answer customer questions and give quick transport price estimates.
- Designed the SQL database for vehicles, drivers, bookings, and delivery routes.
- Set up real-time location tracking so customers can see where their goods are during transport.
- Built a driver-side view where drivers can accept bookings and update delivery status as goods move.

### **Pizza Sales Customer Analysis**

*SQL, Python, Power BI, Excel*

- Studied 12+ months of sales data to find best-selling items, busy order times, and how often customers ordered.
- Built Power BI dashboards showing revenue by product, time of day, and location, which helped guide menu and promotion decisions.
- Cleaned and organized raw sales data using SQL and Python before publishing the dashboards.
- Shared the findings with stakeholders along with clear recommendations for menu and inventory planning.

### **Retail Sales Performance Tracker**

*Excel, Power Query, VBA*

- Built a self-updating Excel sales tracker using Power Query to combine multiple months of CSV data, cutting report preparation time by over 70%.
- Built Pivot Tables and VLOOKUP/INDEX-MATCH formulas with color-coded dashboards to quickly flag performance issues, and automated repeat tasks with a VBA macro.
- Wrote simple documentation for the tracker and macro so non-technical staff could maintain it.

## **CERTIFICATIONS**

---

- Microsoft Power BI Data Analyst Certification — Simplilearn (2024)
- Advanced Excel Certification — Simplilearn (2024)

## **EDUCATION**

---

### **B.Sc. Computer Science — AI & Robotics**

**2021 – 2024**

*Aditya Degree College, Kakinada | Coursework: Statistics, Machine Learning, Database Management, Data Structures, AI Fundamentals*
