

Jagadeesh Nethinti

Data Analyst

Hyderabad, India | +91 93926 96206 | jagadeeshnethinti809@gmail.com

PROFESSIONAL SUMMARY

Data Analyst with 2 years of experience translating raw application data into decisions that moved business metrics, including a 15% lift in marketing campaign efficiency and a revenue concentration finding (35% of revenue from SUVs) that reshaped a car rental pricing strategy. Proficient across the complete analytics pipeline: SQL data extraction, Python-based transformation (Pandas, NumPy), and dashboard delivery in Power BI and Tableau for weekly stakeholder reporting. Experienced in process improvement, business process automation (BPA), and operational performance management (OPM), with a full-stack development background that supports cross-functional collaboration on service delivery and digital transformation initiatives.

TECHNICAL SKILLS

- **Analytics & Visualization:** SQL (Joins, CTEs, Window Functions), Python, Pandas, NumPy, Statistical Analysis, Tableau (Dashboards, Calculated Fields, Data Blending), Power BI (DAX, Data Modeling), Excel (Pivot Tables, Power Query, VLOOKUP/INDEX-MATCH, VBA Macros, Advanced Charts)
- **Process & Service Delivery:** Business Process Automation (BPA), Operational Performance Management (OPM), Process Improvement, Service Delivery Management, Stakeholder Management, Risk Documentation, Continuous Improvement
- **Databases & ETL:** MySQL, PostgreSQL, Firebase, ETL Processes, Data Cleaning, Data Modeling, Data Transformation
- **Development & Tools:** React Native, JavaScript (ES6+), TypeScript, Redux Toolkit, REST APIs, OpenAI / ChatGPT API Integration, Git, GitHub, Jupyter Notebook

PROFESSIONAL EXPERIENCE

Software Engineer & Data Analyst

Pewin Solutions Pvt. Ltd., Hyderabad

July 2024 – Present

Sole analyst on a 2-engineer product team

- Delivered interactive Power BI dashboards using DAX measures and custom visuals to track revenue trends, campaign KPIs, and user engagement metrics, consumed weekly by product and marketing stakeholders for strategic decision-making.
- Performed customer behavior analysis on pizza sales, car rental, and retail platforms using SQL and Python (Pandas); segmentation insights drove a 15% improvement in marketing campaign efficiency.
- Conducted end-to-end SQL analysis on car rental booking data using joins, CTEs, and window functions, surfacing SUVs as the top revenue driver at 35% of total platform revenue and directly informing pricing and fleet strategy.
- Automated recurring ETL reporting pipelines connecting MySQL and PostgreSQL databases to Power BI, reducing manual reporting effort and ensuring consistent stakeholder data refresh.
- Built 20+ React Native UI components with Redux Toolkit and REST API integration, generating the application-level event data later used in analytical models.

KEY PROJECTS

Radii – AI Healthcare Nutrition App

React Native, Python, SQL, Power BI, OpenAI API

- Collaborated with a small team to build a mobile application that generates personalized food and meal recommendations based on user-reported health conditions (e.g., diabetes, hypertension), using the ChatGPT API for recommendation generation and dietary analysis logic.
- Designed and managed the SQL food and nutrition database, with Python handling data processing for the recommendation engine, and built Power BI dashboards for admin-side analytics tracking user engagement and recommendation usage patterns.
- Developed the React Native front-end, enabling users to input health conditions and receive real-time, AI-generated dietary suggestions.

Pizza Sales Customer Analysis

SQL, Python, Power BI, Tableau, Excel

- Analyzed 12+ months of transactional sales data to identify top-selling SKUs, peak demand windows, and customer purchase frequency patterns across product categories.
- Built Power BI dashboards visualizing revenue by product, time-of-day demand, and geographic distribution; cross-validated key revenue and demand metrics in Tableau using calculated fields, presenting findings to management to inform menu rationalization and promotional strategy.
- Wrote complex SQL queries with joins, subqueries, and aggregate functions to calculate average order value, customer lifetime value, and category-wise profit margins, enabling data-driven pricing decisions.
- Performed exploratory data analysis (EDA) and data cleaning in Python (Pandas, NumPy) to handle missing values and outliers, improving data quality and accuracy of downstream reporting by an estimated 20%.

Nex Cars – Car Rental Customer Behavior Analysis

SQL, Python, Power BI, Tableau

- Segmented customers by vehicle preference, booking frequency, and rental duration using SQL window functions and CTEs; identified SUVs at 35% revenue share with the highest customer satisfaction scores, and delivered a structured stakeholder recommendation report on pricing and inventory strategy.
- Built interactive Tableau dashboards with parameter controls and drill-down filters to visualize booking trends, fleet utilization rates, and seasonal demand fluctuations for operations stakeholders.
- Applied cohort analysis and RFM (Recency, Frequency, Monetary) segmentation in Python to classify customers into high-value and at-risk groups, supporting targeted retention campaigns.
- Forecasted monthly rental demand using time-series trend analysis in Excel and Power BI, improving fleet allocation planning and reducing vehicle idle time.

Retail Sales Performance Tracker

Excel, Power Query, VBA

- Built a self-refreshing Excel sales tracker using Power Query to consolidate multi-month CSV exports, eliminating manual copy-paste and cutting report prep time by over 70%.
- Designed dynamic Pivot Tables and VLOOKUP/INDEX-MATCH formulas to break down revenue by category, region, and sales rep, with conditional-formatted dashboards for at-a-glance flags; automated recurring formatting and refresh tasks with a VBA macro to standardize weekly stakeholder-ready reports.

CERTIFICATIONS

- Microsoft Power BI Data Analyst Certification – Simplilearn (2024)
- Advanced Excel Certification – Simplilearn (2024)

EDUCATION

B.Sc. Computer Science – AI & Robotics

2021 – 2024

Aditya Degree College, Kakinada

- Relevant coursework: Statistics, Machine Learning, Database Management, Data Structures, AI Fundamentals
